

CH 22 terms (Campbell)

Dr. Adam Hrinkevich

Across

- 3 The supercontinent that formed near the end of the Paleozoic era, when plate movements brought all the landmasses of Earth together .
- 5 Similarity in characteristics resulting from a shared ancestry .
- 7 A preserved remnant or impression of an organism that lived in the past .
- 9 The scientific study of fossils .
- 11 A rock layer formed when new layers of sediment cover older ones and compress them .
- 12 A feature of an organism that is a historical remnant of a structure that served a function in the organism's ancestors . (2 Words)
- 14 Having characteristics that are similar because of convergent evolution, not homology .
- 15 The evolution of similar features in independent evolutionary lineages . (2 Words)

Down

- 1 Structures in different species that are similar because of common ancestry . (2 Words)
- 2 A branching diagram that reflects a hypothesis about evolutionary relationships among groups of organisms . (2 Words)
- 4 Inherited characteristic of an organism that enhances its survival and reproduction in a specific environment .
- 6 A process in which individuals that have certain inherited traits tend to survive and reproduce at higher rates than other individuals because of those traits . (2 Words)
- 8 The scientific study of the past and present geographic distributions of species .
- 10 Descent with modification; the idea that living species are descendants of ancestral species that were different from the presentday ones; also defined more narrowly as the change in the genetic composition of a population from generation to generation .
- 13 Referring to a species that is confined to a specific geographic area .
