

CH 26 terms (Campbell)

Dr. Adam Hrinkevich

Across

- 1 The process by which a cell in culture acquires the ability to divide indefinitely, similar to the division of cancer cells ; or a change in genotype and phenotype due to the assimilation of external DNA by a cell . When the external DNA is from a member of a different species, transformation results in horizontal gene transfer .
- 5 An evolutionary novelty that is unique to a particular clade . (3 Words)
- 7 A named taxonomic unit at any given level of classification .
- 8 Similarity in characteristics resulting from a shared ancestry .
- 9 Pertaining to a group of taxa that includes distantly related organisms but does not include their most recent common ancestor .
- 10 Groups of organisms that share an immediate common ancestor and hence are each other's closest relatives . (2 Words)
- 12 The evolutionary history of a species or group of related species .
- 13 Pertaining to a group of taxa that consists of a common ancestor and some, but not all, of its descendants .

Down

- 2 A character, shared by members of a particular clade, that originated in an ancestor that is not a member of that clade . (3 Words)
- 3 a branch point within a phylogenetic tree represents the most recent common ancestor of all taxa in the tree .
- 4 A branching diagram that represents a hypothesis about the evolutionary history of a group of organisms . (2 Words)
- 6 A scientific discipline concerned with naming and classifying the diverse forms of life .
- 11 A taxonomic category above the kingdom level. The three domains are Archaea, Bacteria, and Eukarya; or a discrete structural and functional region of a protein .
- 14 In Linnaean classification, the taxonomic category above class .
